# CSV File Reader

**Pre-requisites:**
- Java 1.8+
- Maven 3.5 +

**Steps to run the demo:**
1. Clone the git repo from the url :
2. Go to the directory "csv-reader"
3. Run command "mvn clean install" and you would be able to see the parse csv data into the console.

**Note:**
- CSV file should be in the specific location named "templates" which can be found at "{project-base-path}/templates/".
- CSV file must be in the format which was given for the task to be able to parse it properly for the generation of the output.
